

A protective visor optical class 1

This protective visor consists of 3 parts: a clear visor mounted on a forehead pad equipped with an elastic adjustable headband.

The clear visor is injected in PC (Polycarbonate). It provides total protection of the eyes, nose and mouth with full agility of the head. Below the visor there is enough space for eyeglasses. The optical quality is of the highest standard (class 1 of the norm). The special prism effect with variable visor thickness allows clear view without distortion. This visor fully meets the EN166 Personal Eye Protection European Standard and is produced in Europe.

It can be easily cleaned by using soapy water.

The visor is rigidly fastened on the forehead pad. The adjustable elastic headband is fixed on each side of the forehead pad.

The forehead pad is injected with PP (Polypropylene). Available colours are white, black and blue. A poly-olefin foam band attached to the forehead pad makes wearing the visor more comfortable without irritating the skin. The 40mm wide headband allows easy height adjustment. It is black and adjustable like a ski mask.

The complete system is low weight and easy to use (160g).

The visor is delivered in a cloth bag with a drawstring cord.

The visor comes with good anti-scratch coating and anti-fog coating.
